

Vim - more or less

Why vim and do you need to use it?

Shashank Chakravarthy, 09/03/2023

BUT WHY

- High availability
 - IDEs aren't always available everywhere, but Vim is.
- Low latency, small FOOTPRINT, fast startup, more screen space
- Customizable (really)

Why am I using it?

Dan Sanger 3 months ago

I started using Vim ten years ago and never stopped... because I never figured out how to exit the program.
